**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35

U.S.C. 121:

- I. Claims 1-3 and 5-11, drawn to a method of making a silicide resistor, classified in class 438, subclass 382.
- II. Claim 4, drawn to a method of making a silicide resistor in combination with a via hole, classified in class 438, subclass 637.
- III. Claims 12-20, drawn to a semiconductor device and a resistor for a semiconductor device, classified in class 257, subclass 536.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related to invention III as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by a materially different process other than filling an ILD trench with polysilicon, such as depositing a layer of polysilicon on top of a flat or non-trenched ILD

layer, etching portions of the polysilicon to form the resistor, and subsequently growing an additional ILD layer to the sides of the resistor.

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination could use an ILD not specified for in the subcombination claims, such as a low-k dielectric. The subcombination has separate utility such as a silicide resistor in a device that does not require a via contact to a layer below.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
